

COTTO 

GLOBAL VISION

VISION OF THE LEADER, THAI
BRAND THAT STEPS FORWARD
AS GLOBAL BRAND.

Over the years, COTTO has become more and more established as a world-class manufacturer of tiles and sanitary ware. COTTO products are a result of substantial investment in pioneering production technology and extensive researches which allow us to best understand and respond to the behaviors and the culture of consumers in each locality of the world.

Our stance is to be the responsible trendsetter in the tile and sanitary ware industry. Such ambition will position us as the brand that affords customers utmost satisfaction eventually.

SANPANG-IAM KRIANGKRAI

INNOVATION DIRECTOR

Today the competition is high and our products are often compared with ones from foreign brands, however, I always believe that actually Thai people are capable not less than others, including idea, designing ability, and skill of high-quality production. As Thai people, I want to create a product under a Thai brand that would become world-class product and global brand.

Sanpang-iam Kriangkrai, Innovation Director, is the first designer who paves the way and develops product design under the brand COTTO. She has also pushed Thai product for worldwide recognition for about 25 years.

The background of this skillful female designer started from her passion in art and her attention towards trends of design around the world. These result in the uniqueness she often puts into her creations. Sanpang-iam Kriangkrai also applies the idea of thinking forward to differentiate her products and to provide the best quality, for example, the sanitary ware 'Sofa So Good' which is different from other sanitary wares because of its furniture-like design and comfortable sensation like sitting in a living room, or the sanitary ware 'For All Series' which is suitable for children, the elderly, and the disabled, as a consequence, it has become recognized very well by Thai and foreign customers.

Although Sanpang-iam Kriangkrai is now on the front line of the design profession, her dream is still to create high-quality products and to push Thai products for international recognition with the concept of design differentiation. She strongly believes that "Thai people have potential not less than other countries, especially their idea, design, and production skills

SOMNUK KAMOLSEVEKUL

PRODUCT DEVELOPMENT DIRECTOR

Good design should also be sustainable design which can serve the needs of customer (People), manufacturer (Producer), and help preserve environment (Planet). I always share this idea to young designers and I want to convey the message to the customers via my design.

Somnuk Komolsevekul, Product Development Director, is one of the front-line designers in product design profession and one of the founders of The Siam Sanitary Fittings Co., Ltd. who supervises the company's technology with the idea of sustainable design.

For around 22 years, Somnuk Kamolsevekul has played an important role in product design profession, thus, he does not only have a great deal of experience but also distinct ideas and high-quality works that prove his ability. He has won many product design awards both in Thailand and worldwide, for example, SHOWER MODULAR (MODULAR SERIES) and DEMARK/ GMARK 2009, HIMMAPHAN SERIES and DEMARK 2010, and LED FAUCET (Anti-Bacteria Smart Drain Series) and DEMARK/ GMARK 2010.

Somnuk's technique to create his work buds from the long experience in his profession, not to mention that he is a great thinker and developer who spends most of the time researching for new knowledge for product development. As a result, his design, influenced by the idea of "sustainable design," can completely serve the customers.

WIRIYA WATTANAYON

DESIGN SUPERVISOR

Every product has its own story. Design, thus, has to begin with good information to meet consumer's needs. Moreover, it must distinguish itself from others and combine the cutting edge technology to emphasize brand's leadership.

Wiriya Wattanayon, Design Supervisor of COTTO's Surface Covering, is an enthusiastic young product designer who won awards for best product design internationally.

Wiriya Wattanayon might not be a well-known name for general people, but among the designers, he is one of many young designers with outstanding achievements. He is not only recognized by Thai designers, but also well-known to foreign ones since he has won two international design awards: Design Excellence Award and Good Design Awards 2010 from Japan, from his tile designs, 'Motion Series' and 'Pop Retro Series,' that he had dedicated himself on research and supervision of every production process in order to create exquisite, durable, and high-quality mosaic tiles.

Wiriya's ability has been proven and guaranteed by the international awards, however, he never stops learning and experimenting new things to create and improve the quality of his works. The characteristic of his design is the use of material core for differentiation and employing new technology to create freshness of each design.

The green vision, the leading brand vision.

Green Vision

Due to SCG's vision to run business with sustainable development policy and COTTO's regards to its business partners of all aspects: economics, environment, and society, every activity or every step of COTTO is established on a policy to live sustainably with the earth. This is reflected on COTTO's product development under ECO COTTO, a brand which creates products with the awareness of efficient resource usage, for example, tiles that are made from recycled materials, water-saving faucets and sanitary wares, which provide appropriate water flow rate for each use. These products are specially designed to satisfy consumers' environmental awareness. On social aspect, COTTO has initiated projects which aim to develop personnel like university students, for instance, Sustainable Design Camp; COTTO Bathroom Solution Contest; Better Together, a project encouraging cooperation among people in a community to use their knowledge and skills to develop their residences and bathrooms; and a project to develop communities surrounding the COTTO factories. Today, COTTO is still engrossed in researching and developing for innovative products and to meet the demands of consumers around the world. Moreover, COTTO is set in living sustainably with the earth, reflecting our standpoint to be the responsible trendsetter.

Green Innovation

COTTO has been continuously offering environmentally-friendly products, for example, the products from ECO COTTO brand, the products from environmentally-friendly production or usage, and especially the products verified by SCG with 'SCG eco value' label. SCG is considered Thailand's first corporation which provides a label certifying its environmentally-friendly products. Products or services with 'SCG eco value' must be manufactured with specialized production process to reduce environmental effect as much as possible and more than other regular products. Moreover, these products must comply with ISO 14021, and pass the consideration and approval of SCG board.

Products certified with 'SCG eco value' and now under ECO COTTO's marketing are, for example,

COTTO Eco Tiles: Eco Rockrete and Eco Touch models, made with 60% recycled materials

COTTO Eco Toilet Dual Flush 3/4.5, water saving sanitary ware which can flush with 3 liters or 4.5 liters of water each time

COTTO Eco Faucet, with water saving rate 40% higher than Thai Industrial Standard (TIS)

Furthermore, COTTO also cares for environmentally-friendly and effective production process. As a consequence, COTTO has become the first brand to be certified with CO2 reduction label for its tile, sanitary ware and faucet productions. In addition, COTTO is also the first brand of which all faucets passed TIS, including limitation of heavy metals and contaminants to the safe level for human body.

ULTRACLEAN+

Cotto's research and development team have developed a new technologically advanced compound called "UltraClean+". These compounds used inside and outside of vitreous china help reduce the accumulation of germs and bacteria with a self-reduction rate of 99% within 24 hours. UltraClean+ has the added benefit of increasing the ceramic strength and integrity as well as reducing the porous surface inherent in ceramics.

The first layer of the compound is sprayed white and fills any gaps that might be present before beginning the heat treatment process. A second layer is then applied which makes the ceramic surface smoother and flawless by eliminating any rough imperfections.
